

Authorship & Integrity Statement

Required for every student author. Each student author signs their own copy, and the submitting author uploads all copies with the manuscript.

1. Manuscript and author

Manuscript title

Student author's full name

School or institution

2. Statements

Please initial each statement.

_____ **My own work.** The research question, analysis, figures and writing presented as my work are my own, or were done jointly with the co-authors listed in the contribution statement.

_____ **Originality.** The work is original or substantially original. Wherever it builds on, extends or recreates previous work, the manuscript says so clearly and cites that work.

_____ **AI tools.** No AI tool (such as ChatGPT, Claude or Gemini) generated any of the manuscript's text, figures, analysis or results. If I used AI at all, it was only minimally, to explain concepts or definitions or to help debug code I wrote, and the manuscript describes that use in an AI-use statement in the Acknowledgements.

_____ **Data and code.** The manuscript includes a data and code availability statement, and I will share the data and code on reasonable request. Any data about people is de-identified.

_____ **Ethics.** Any work with human participants, vertebrate animals or hazardous materials followed the applicable rules and approvals, and the manuscript describes them.

_____ **No other publication.** The work has not been published in another journal and is not under review elsewhere. (Preprints and science fair entries are allowed.)

_____ **Verification.** I understand JYSR may contact my mentor, or ask me for working files or a short video call, to confirm the work is mine, and that false statements may lead to rejection or retraction.

3. Mentor

Tick one. A mentor is strongly recommended. JYSR may email your mentor to confirm your role in the work.

☐ I worked with a mentor or teacher, named below.

Mentor's name

Role / institution

Email

☐ I did this work without a current mentor. I have uploaded an **independent research statement** (up to one page) explaining how I learned the methods and did the work. If it extends earlier mentored work, the statement names that mentor and project and explains what is new.

4. Signature

Student signature

Printed name

Date

Questions: editor@youthscienceresearch.org. This form is used only to administer the submission and is never published.
